### Flanged Disc Harrow Bearing Units

**Dynamic Alignment • Positive Relubrication • Close Clearance Shroud Protects Bearing  
Circumferentially Restrained Outer Ring • High Performance BCA-NTN® USA Disc Harrow  
Bearing • Plated Case Hardened Stampings • Solid Rivet Retention of Stampings**

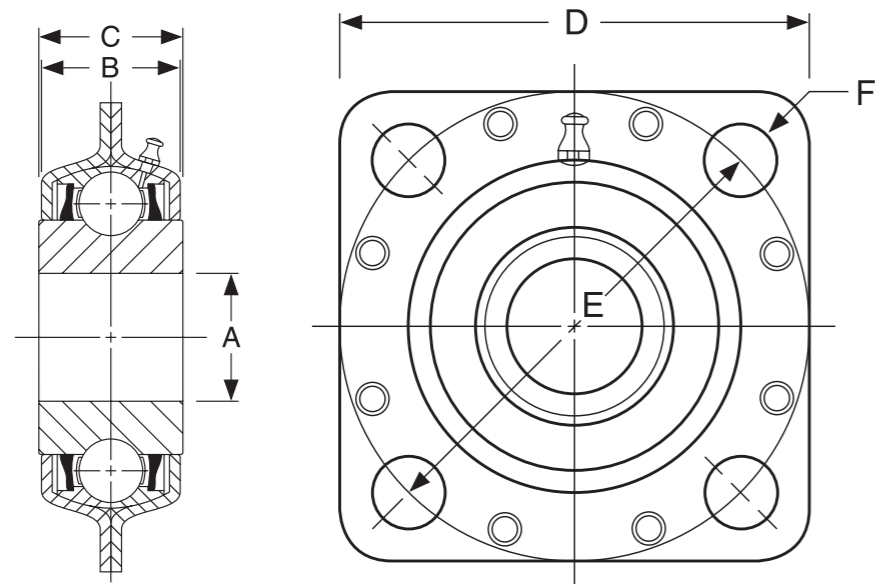

Flanged disc harrow bearing units are integral assemblies specifically designed for the most severe tillage applications. Each configuration incorporates certain special dimensional attributes making the unit compatible in a variety of equipment designs. Inherent in most designs are two heavy gauge case hardened and zinc plated stampings which encapsulate the bearing with eight cold formed rivets for guaranteed integrity. Within the cavity two nitrile "O" rings are installed to exclude contaminants and provide a grease seal to ensure lubricant feeds directly into the bearing. The grease fitting is permanently retained in the stamping for easy access and maximum protection from the environment.

### Flanged Disc Harrow Bearing Units

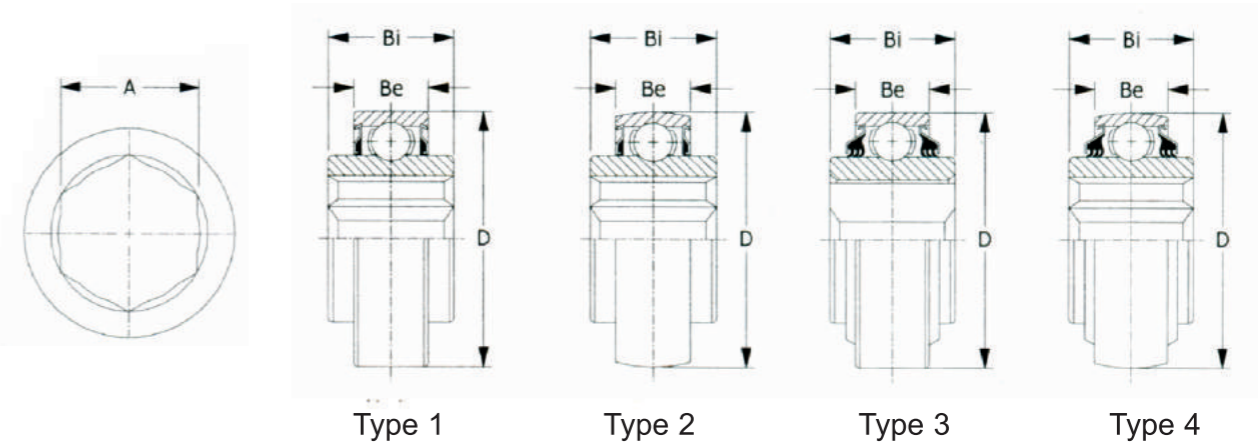

### Hex Bore Agricultural Bearing

This series bearings feature with a Hex bore inner ring. Used in applications where collars, set screws, or any other locking devices are not required. This seals incorporates BRM's Trash Seal, a close fitting metal shield backed by a molded rubber seal. Also available relubricable--prefix "G".

low speed moderately loaded applications. Primarily in agriculturals and conveyors.

### Special Agricultural Bearing

This series Special Agricultural Bearings incorporates a standard Conrad type bearing with a special heavy-duty contact seals. This allows use in heavy contaminated areas such as Planers, Double Disc opener Assemblies, Great Plain Drills. Is applied widely for John Deere, New Holland, Cultivator, Lilliston, Krause, Amco etc planter gauge wheels, great plains planter, drills, many applications.
